Notice of inquiry from DOC

The journey towards a digitized world is gaining good speed in the 'last' frontier of the digital age - Africa. Africa lost out in the agricultural and industrial revolutions. Would it lose out again in the digital revolution?

The opportunity for Africa to leapfrog is in using ICT to develop and arrive at a prosperous Digital Economy. No Cyber phobia should be allowed to slow-down Africa's connectivity for development. Rather, our awareness campaigns should focus more on cyber benefits rather than weakness; on security rather than crime; and on collaboration rather than dissociation.
